SAP MM Production Support: Troubleshooting Cheat Sheet

Frequent L2/L3 tickets with root cause, checks and fix | Author: Manikandan S

How to use: find the symptom, run the check, apply the fix, then document the root cause so the ticket does not repeat.

Issue	Typical root cause	Checks	Fix
Release strategy not triggering on PO	Value, document type or purchasing group outside strategy conditions; class not assigned	ME23N release tab; classification in release strategy config	Correct classification or assignment, then create a new test PO
PO stuck, approver cannot see it	Wrong release code assignment; approver not mapped	ME28 / ME29N selection; code-to-user assignment	Fix release code or workflow assignment
Invoice blocked in MIRO (price)	Invoice price higher than PO price beyond tolerance	PO history; OMR6 tolerance keys PP / PS	Correct PO price or release in MRBR after approval
Invoice blocked (quantity)	Invoiced quantity exceeds goods received	PO history; MB51; GR posted?	Post missing GR or reduce invoice quantity
GR/IR balance not clearing	Missing invoice, missing GR or small variances	MB5S; PO history	Post missing document; use MR11 for approved write-offs
Account determination error on GR or MIRO	Valuation class or OBYC key not maintained	MM03 accounting view; OBYC; simulate in OMWB	Maintain the missing account assignment
Posting period closed	Period not open for the posting date	MMPV, MMRV; FI periods in OB52	Open period or change the posting date, as approved
Wrong or missing price on PO	Info record or contract condition expired or not valid	ME13; contract validity; condition records	Maintain valid condition record or update info record
No source found for PR	Source list or info record missing; vendor blocked	ME01; ME11; vendor purchasing block	Create or update source list and info record
Subcontracting component shortage	Components not provided to vendor or wrong BOM	ME2O; stock at vendor; component list in PO	Post transfer of components (movement 541) to vendor
Consignment settlement not happening	Consignment stock consumed but not settled	MRKO; consignment stock report	Run MRKO to settle liabilities
STO delivery or goods issue problem	Delivery not created or stock in transit mismatch	ME2N; delivery in VL10B / VL02N; MB5T	Create delivery, post goods issue, then goods receipt at receiving plant
Material not extendable to plant	Plant views not created or master data incomplete	MM01 / MM02; plant and storage location views	Extend material to the plant with required views
IDoc in error status	Master data or mapping error; partner profile issue	WE02 / WE05; BD87 reprocess	Fix data issue, then reprocess the IDoc
Negative stock posting error	Stock not available at plant or storage location	MMBE; material valuation settings	Post missing receipt first; allow negative stock only as per policy

Standard root-cause approach

- **Reproduce** the issue in the quality system, or check the document flow in production.
- **Isolate** the layer: master data, configuration, authorization, or interface.
- **Fix** in the right place and move changes through the transport route.
- **Verify** with the user, then close the ticket with the root cause written down.
- **Prevent** repeats: update the knowledge base and train users where needed.

T-codes are standard SAP. Exact behaviour depends on the system configuration. All entries are generic.
